HOW TO TRANSPLANT THE BUDDED PECAN TREE
As Grown By
PECANWAY NURSERY
Orangeburg, S. C.

TIME: From 15th January to 1st March.
DISTANCE APART: If in squares, 90 feet. We like the following method better:
Check off land in 55-foot squares.
Transplant trees in squares of 110 feet, and one in center of 110-foot square.

Plant Trees Where Round Black Spots Are.

MANNER OF PLANTING
Short Tap-Rooted Tree
BLAST HOLES

We would not DIG a hole to transplant our trees. We urge you
to BLAST each hole. After cleaning out hole to proper depth and wide
enough to receive the lateral roots without bending, set tree from 5 to 6
inches below the original nursery setting. Throw in 3 or 4 inches of top
earth, and dash in enough water to wash earth thoroughly around the
lateral roots, thereby completely excluding light and air; as you proceed,
keep roots straight, and make earth firm, by pressing with hand or foot.
Mix common sense with the water—don't put too much or too little of
the latter.

You can get specific information about dynamiting from any Farm Demonstration Agent.

Do not put any fertilizer of any kind to our trees when you trans-
plant. Later, in the Spring, however, (just before the buds begin to
swell) fertilize as follows:

Dissolve, in hot water, 12 cans of Star Lye (or some other good
lye) and pour this into a barrel containing about 50 gallons of water:
add to this, 3 pounds Muriate of Potash and 5 pounds of Bone Meal
(ground animal bone) or 4 pounds of Cotton Seed Meal in the place of
the Bone Meal. Apply about 4 to 6 quarts of mixture to the tree, by
pouring same in 5 or 6 holes, punched 2½ feet deep, around the tree, and
3 feet from it. Punch these holes with an old hoe handle, sharpened at
one end; or a piece of 1-inch round iron, 4 feet long, sharpened at one end,
and a shepherd's crook at the other.

Do not plant small grain in orchard—nor cow peas. Plant burr
clover or crimson clover in conjunction with velvet beans or soy beans
and hog them down and disc in the vegetation.

We do not guarantee our trees to live, but, with proper care, they
ought not to die.

We do not guarantee that the varieties we sell are IMMUNE to
pecan scab, but they are RESISTENT to that trouble. After years of
practical experience, we are planting only the one variety. We sell no
other kind of tree.

If you are well pleased with our trees, and desire to increase your
purchase next fall, let us hear from you early, as our nursery is small.
